LUMINOUS CREW

LUMI TOKEN WHITEPAPER

“A Community Coin Platform Where Consumption Becomes Cooperation”

Version 1.0 · 2026

Table of Contents

CHAPTER 1

Executive Summary

1.1 Introduction

The digital economy is growing rapidly, and blockchain technology is becoming a foundation for new value creation across industries beyond finance. Yet many blockchain projects remain focused on the technology itself, and the challenge of building an ecosystem that is genuinely and continuously used in everyday consumption still remains largely unresolved.

LUMINOUSCREW proposes a new direction within this environment: a 'community coin platform where consumption becomes cooperation.' Rather than treating consumption as a mere economic transaction, the project aims to expand it into a process of cooperation in which users, merchants, and the platform grow together. Within the LUMINOUSCREW ecosystem, LUMI Token is designed not simply as a digital asset, but as the core value medium that connects the platform.

This whitepaper describes the project's vision, ecosystem, technical architecture, token information, and future development direction. It is not intended as a solicitation for investment.

1.2 Vision and Mission

> *A community coin platform where consumption becomes cooperation*

LUMINOUSCREW's vision is to expand consumption into a new form of cooperation. Today, most consumption ends the moment a product or service is purchased. The project aims to move beyond this one-off structure and build a sustainable ecosystem in which consumption leads to platform participation and community formation.

The mission that underpins this vision is as follows.

- Connect consumption and community within a single platform
- Foster an environment where users and merchants grow together
- Build a trustworthy, blockchain-based service structure
- Expand the practical utility of the digital asset
- Build a sustainable platform ecosystem

1.3 Core Values

LUMINOUSCREW operates around four core values. These are not mere brand messaging, but foundational principles that run through service design, ecosystem operations, and technical architecture.

Core Value	Description
Connection	A platform that connects people to people, users to merchants, and platforms to services
Community	A sustainable community where every participant can grow together
Trust	Trust built through a transparent system and stable platform operation
Growth	Pursuing sustainable development through an environment where the platform and its members grow together

1.4 Executive Highlights

Community First

LUMINOUSCREW places people, not technology, at its center. The platform's most important asset is not the blockchain but the users and merchants who use it, and every technology serves as a foundation for enhancing the participants' experience.

Consumption Cooperation

The project views consumption not as a simple transaction but as a new structure of cooperation. The connections formed during consumption extend the relationship between users and merchants, and the platform aims to develop these connections into a sustainable community.

Digital Asset Utility

LUMI Token is the core digital asset that connects the flow of value within the ecosystem. As the platform grows, the token's utility base is intended to expand alongside it.

Scalable Platform

A platform structure that connects the user application, digital wallet, payment system, smart contracts, and transaction processing system provides the foundation for service scalability and continuous functional advancement.

1.5 LUMINOUSCREW at a Glance

Item	Description
Project	LUMINOUSCREW
Token	LUMI
Blockchain	BNB Smart Chain (BEP-20)
Total Supply	10,000,000,000 LUMI
Decimals	18
Mint	Disabled
Burn	Supported
Vision	A community coin platform where consumption becomes cooperation
Core Values	Connection · Community · Trust · Growth

1.6 Purpose and Scope of the Whitepaper

This whitepaper is based on the official materials of the LUMINOUSCREW project and describes its vision, technical architecture, ecosystem, token information, and roadmap. It is not intended as a solicitation for investment, but serves as an official technical document for understanding the project's direction and operating structure. As a matter of principle, this document does not include speculation or assumptions about policies or functions that have not been publicly disclosed.

CHAPTER 2

Industry Background & Project Philosophy

2.1 The Evolution and Limits of Digital Commerce

The spread of e-commerce and mobile platforms has allowed consumers to access a wide range of products and services without constraints of time or place, and online platforms have become core infrastructure of the modern economy. Search has become faster, payments simpler, and delivery quicker.

Despite this progress, however, consumption itself has largely remained a one-off transaction. Consumers purchase products and use services, but the relationships and participation formed in the process often do not continue beyond the transaction. LUMINOUSCREW places greater value on the connection formed after a transaction ends than on the moment the transaction itself concludes.

2.2 Community as a Sustainable Asset

Community is a key factor determining a platform’s sustainability. Many digital services succeed in acquiring users but struggle to sustain long-term engagement and relationships, whereas platforms where users and service providers remain continuously connected can generate stronger network effects over time.

LUMINOUSCREW defines users and merchants not as mere users of a service but as participants who build the ecosystem together, and treats community as a core asset of the project.

2.3 Blockchain as Infrastructure

LUMINOUSCREW uses blockchain not as an end in itself but as underlying infrastructure. The project’s basic direction is that users should be able to use the platform without needing to understand complex blockchain technology, while internally, the digital wallet, smart contracts, transaction processing systems, and blockchain network are organically connected to support the reliability and transparency of the service.

2.4 Connecting Consumption and Community

The core concept LUMINOUSCREW puts forward is the connection between consumption and community. The project views consumption as a starting point, seeking to build an environment in which the relationships formed between users and merchants during consumption can lead to sustained participation and cooperation. This direction reflects an expansion of consumption from an individual, one-off act into connected participation in the ecosystem.

2.5 The Meaning of Trust

Trust is one of the most important elements of a digital platform. Users must be able to use the service safely, and merchants must be able to expect a stable operating environment. LUMINOUSCREW's official system architecture includes components such as Authentication, Smart Contract, Risk Monitoring, and the Settlement Engine, and the project regards building a structure that sustains trust over time — rather than manufacturing trust through technology alone — as an important value.

Chapter Summary

Amid the changing landscape of digital consumption, LUMINOUSCREW presents a new platform model that connects consumption with community. The project uses blockchain as an underlying technology rather than as the purpose of the service, and designs its ecosystem around user experience and community. This philosophy is summarized in four core values — Connection, Community, Trust, and Growth — which form the foundation for the ecosystem structure, technical architecture, and token design described in the following chapters.

CHAPTER 3

Ecosystem & Technology Architecture

3.1 Ecosystem Overview

The LUMINOUSCREW ecosystem is designed around the organic connection of users, merchants, platform services, the digital wallet, and blockchain technology. Rather than operating independently, each component interacts within a single integrated platform, and LUMI Token sits at the center of this ecosystem as the core digital asset connecting the flow of value.

The ecosystem is built on three principles.

Principle	Description
Connectivity	Users, merchants, the platform, and technology interact within a single flow, forming the basis for service expansion
Participation	Users are both consumers and community members; merchants are partners who provide services while participating in platform growth
Sustainability	The focus is on building an environment where the platform and participants grow together, rather than short-term user growth

3.2 Core Participants

User

Users are at the center of the ecosystem. Every platform service is designed around the user experience; users access the platform through the User Application and connect with various services after completing authentication.

Merchant

Merchants are another core participant in the ecosystem. The Merchant Platform connects users and merchants, and both are defined not as parties to a simple transaction but as participants continuously connected within the platform.

3.3 System Architecture

LUMINOUSCREW's official system architecture adopts a five-layer structure in which the layers are interconnected.

Layer	Key Components	Role
User Layer	User Application, Authentication	The point where users interact with the platform
Service Layer	Merchant Platform, Payment Gateway, Digital Wallet	Provides services connecting users and merchants
Processing Layer	Transaction Processing Engine, Price Engine, Settlement Engine, Risk Monitoring	Processes transactions and data flow
Blockchain Layer	Smart Contract, Blockchain Node	Connects the blockchain network with the platform
External Integration Layer	Banking System	Links with external financial systems

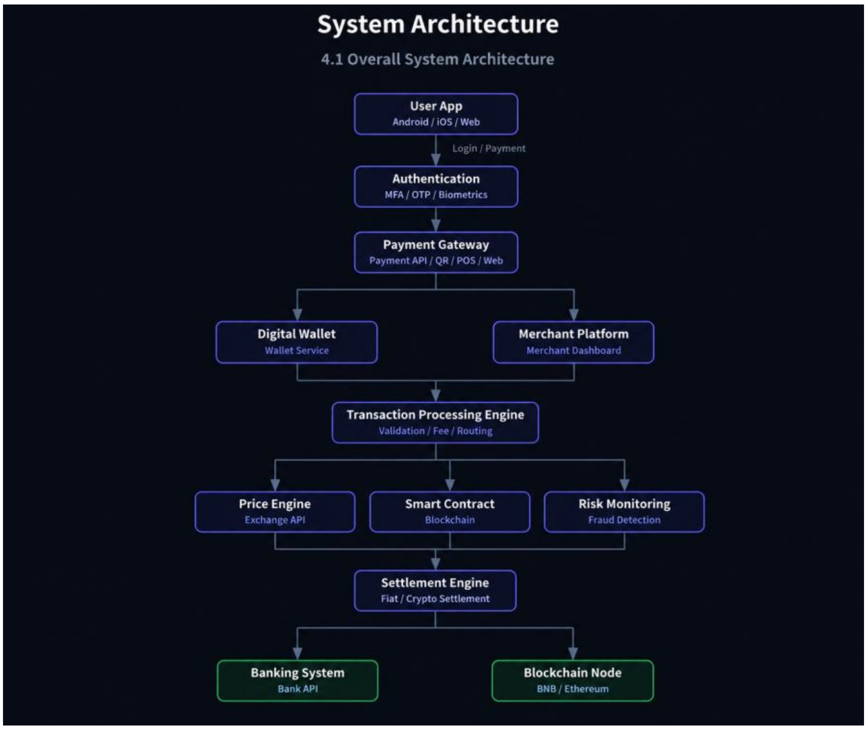

Figure 1. LUMINOUSCREW System Architecture — reconstructed from official materials

3.4 Core Components

No component exists in isolation; each is interconnected within the overall ecosystem to support platform operations. Based on publicly available materials, the roles are as follows.

- Digital Wallet — manages digital assets within the platform and connects the blockchain network with platform services
- Payment Gateway — supports the flow of payments between user services and the transaction processing system
- Smart Contract — supports blockchain-based service operations and digital-asset-related functions
- Transaction Processing Engine — processes transactions occurring within the platform and connects them to settlement and the blockchain layer
- Price Engine — handles price-related processing within the platform (detailed algorithms are not publicly disclosed)
- Settlement Engine — supports settlement after transaction completion and is linked with the Banking System
- Risk Monitoring — linked with transaction processing and operational workflows to support stable platform operation (detailed operating methods are not publicly disclosed)
- Blockchain Node — core infrastructure connecting the platform to the BNB Smart Chain (BEP-20) network

Detailed smart contract logic, authentication methods, and encryption algorithms are not disclosed in the project's official materials, and this whitepaper describes only what can be confirmed from official, publicly available information.

3.5 Service and Value Flow

The flow of value and transaction processing within the ecosystem can be summarized based on the system architecture shown in Figure 1. Users log in and authenticate through the User App, then request payment via the Payment Gateway, which connects to the Digital Wallet and the Merchant Platform. The Transaction Processing Engine then validates and routes the transaction, with the Price Engine, Smart Contract, and Risk Monitoring supporting processing in parallel, before settlement is completed through the Settlement Engine to both the Banking System (fiat) and the Blockchain Node (BNB/Ethereum).

3.6 Design Principles

Principle	Description
User-Centric Design	Technology should support users in using the service naturally, without requiring conscious effort
Integrated Platform	Each system is not operated independently but organically connected within a single platform
Trust-Based Infrastructure	Trust is sustained continuously through the overall platform structure, not through any single function
Sustainable Expansion	The technical structure is designed to accommodate future service expansion and ecosystem growth

Chapter Summary

LUMINOUSCREW's ecosystem and technical structure aim to integrate user experience, service operations, transaction processing, and blockchain infrastructure into a single platform. The multi-layer structure, from the User Application to the Blockchain Node, supports the platform's stability and scalability, and forms the foundation for understanding LUMI Token and the token economy described in the following chapter.

CHAPTER 4

LUMI Token

4.1 Token Overview

LUMI Token is the core digital asset that makes up the LUMINOUSCREW ecosystem. The project aims to connect users, merchants, platform services, and blockchain infrastructure into a single ecosystem, and LUMI is designed as the central element supporting the flow of value within this structure. The token is defined not as a standalone crypto asset, but as part of an ecosystem that grows together with the platform.

Item	Specification
Token Name	LUMINOUSCREW Token
Symbol	LUMI
Blockchain	BNB Smart Chain
Token Standard	BEP-20
Decimals	18
Total Supply	10,000,000,000 LUMI
Minting	Disabled
Burn	Supported

The information above is compiled based on the project's official materials.

4.2 Token Philosophy and Role in the Ecosystem

LUMI Token is intended to be more than a simple digital asset — it aims to serve as the medium that connects platform participants. Built on the vision of 'a community coin platform where consumption becomes cooperation,' the token is defined as the core element connecting participation within the ecosystem.

LUMI is issued on the BNB Smart Chain (BEP-20) standard. BEP-20 is a widely used token standard within the BNB Smart Chain ecosystem, offering high compatibility across a range of wallets and blockchain services.

4.3 Supply Policy

Fixed Supply

LUMI Token has adopted a fixed total supply of 10,000,000,000 LUMI, and additional minting is not supported. This policy reflects the basic principle of maintaining a clearly defined token supply.

Burn Policy

LUMI Token supports a burn function. However, the currently disclosed materials do not provide details on the burn mechanism, execution conditions, or operating policy. This whitepaper therefore states only that the burn function is supported, without describing any additional operating mechanisms.

4.4 Token Distribution

The distribution structure of LUMI Token is designed to support the project's long-term ecosystem operations and sustainable growth strategy. Detailed allocation ratios follow the project's official materials. In the final version of this whitepaper, the token distribution ratios from the official website will be reconstructed as a pie chart and infographic.

Allocation	Ratio
Ecosystem	73%
Private Sale	10%
DeFi Compensation Pool	10%
Partner	2%
Team	5%

* The table above is illustrative; final figures will directly reflect the Token Distribution information published on the official website.

Token distribution follows these principles: Ecosystem First, which prioritizes the continued growth and activation of the platform ecosystem; Community Growth, which considers community activation and long-term participation; Sustainable Development, which supports ongoing technical development and service advancement; and Transparency, under which the project explains its token policy based only on publicly disclosed official information.

4.5 Token Flow

LUMI Token is designed as a digital asset that connects participants and services within the ecosystem. The conceptual value flow is as follows: User → LUMINOUSCREW Platform → Merchant / Wallet / Community → LUMI Token → Blockchain Infrastructure.

As user participation, service scope, and the merchant network expand alongside platform growth, this circulation structure is intended to develop in stages as well.

4.6 Token Governance Principles

- Clear disclosure of token specifications
- Maintaining a fixed supply
- No support for additional minting
- Operations based on official information
- Platform-centered ecosystem growth

The currently disclosed materials do not include any separate on-chain governance or DAO operating model, and this whitepaper therefore does not describe one.

Chapter Summary

LUMI Token is the core digital asset that connects users, merchants, and platform services at the center of the LUMINOUSCREW ecosystem. It follows the BEP-20 standard on the BNB Smart Chain, with a fixed total supply of 10,000,000,000 LUMI and no support for additional minting. The token supports a burn function, and its distribution and operations are managed transparently based on official materials.

CHAPTER 5

Roadmap & Future Vision

5.1 A Vision for Sustainable Growth

LUMINOUSCREW prioritizes building a sustainable ecosystem over short-term results. The platform seeks to foster an environment in which users, merchants, and a range of services grow together, securing long-term competitiveness through phased service expansion. The project's development is defined not merely as the addition of individual features, but as an ongoing process of expanding the connectivity and scope of the entire ecosystem.

5.2 Development Strategy

Strategy	Description
Platform Enhancement	Continuously improve user experience and raise the stability and completeness of the platform
Ecosystem Expansion	Expand the merchant and user base to broaden platform participation and strengthen ecosystem connectivity
Community Growth	Treat community as a core asset of the project and build a sustainable growth structure based on participation and cooperation
Global Vision	Pursue global market expansion after strengthening the service foundation in the domestic market

5.3 Official Roadmap

Schedule	Milestone	Description
Oct 2026	Outstanding Products	Building the core services and product foundation to strengthen platform competitiveness
Nov 2026	PancakeSwap Listing	Expanding accessibility and liquidity for LUMI Token

Schedule	Milestone	Description
Jan 2027	UX/UI & Merchant Upgrade	Improving user experience and upgrading the Merchant Platform
Feb 2027	Offline Merchant Expansion	Extending platform reach into offline merchant channels
Apr 2027	Open Marketplace	Expanding ecosystem services and participation opportunities
May 2027	Startup Discovery	Broadening ecosystem diversity by discovering new collaboration opportunities
Jul 2027	Global Expansion	Phased expansion into global markets

* This schedule is compiled based on the project's official materials, and actual progress should be confirmed through the project's official announcements. Details not disclosed publicly, such as country-specific operating strategies, are not included in this whitepaper.

5.4 Long-Term Vision

LUMINOUSCREW's long-term goal is to build an ecosystem in which technology, services, and community develop together. Long-term growth is defined not simply as an increase in user numbers, but as a structure in which the connections and cooperation among ecosystem participants continue to strengthen. Through ongoing platform improvement, expanded participation, and global market entry, the project plans to progressively expand the utility base of both LUMI Token and the platform.

Chapter Summary

LUMINOUSCREW's roadmap centers on platform enhancement, the PancakeSwap listing, merchant expansion, the Open Marketplace, startup collaboration, and global expansion as its key milestones, forming the basis of the project's sustainable growth strategy. The roadmap is not merely a schedule, but a core element illustrating the long-term vision and direction the project pursues.

CHAPTER 6

Risk Factors

6.1 Introduction

All blockchain projects and digital platforms may be affected by technical, operational, and market factors. This chapter describes general risk factors to be considered in the course of the project’s operations, and is not intended to guarantee or predict any specific outcome.

6.2 Technology and Network Risk

Blockchain technology is a continuously evolving field, and various technical challenges may arise during platform operation depending on system stability, network conditions, software updates, and technological advances. Because LUMI Token operates on the BNB Smart Chain (BEP-20), network congestion, transaction processing delays, changes in block generation speed, and other operational conditions of that network may affect the service environment. These factors are outside LUMINOUSCREW’s direct control.

6.3 Market Risk

The digital asset market can be highly volatile. The market price of LUMI Token may be affected by a range of external factors, including supply and demand among market participants, trading environments, liquidity, and overall market conditions. This whitepaper does not guarantee any increase in token price or investment return.

6.4 Regulatory Risk

Laws and regulations relating to blockchain and digital assets vary by country and region and may continue to change. Such regulatory changes may affect the project’s method of operation, the scope of services provided, or token-related activities. The currently disclosed materials do not include information regarding regulatory approval or licensing in any specific jurisdiction, and this whitepaper makes no additional claims in this regard.

6.5 Operational and Ecosystem Risk

Platform operations may be affected by various external factors, such as system maintenance, service updates, infrastructure failures, and issues with external service integrations. The pace of ecosystem growth may also be affected by market conditions, service development, and the level of community engagement. While the project aims to build a long-term ecosystem, it does not guarantee any particular pace or scale of growth.

6.6 Information Disclosure and Investment Considerations

This whitepaper contains information current as of the time of writing. The project's policies or features may change through future official announcements. This whitepaper is intended to describe the project's structure and vision, and does not constitute investment solicitation or advice. All decisions and responsibility regarding the acquisition or trading of the token rest with each participant, and platform users and token holders should confirm applicable laws and regulations and observe the security practices required to manage their digital assets.

Chapter Summary

While LUMINOUSCREW aims to build a sustainable ecosystem, it may be affected by a range of external factors, including the technology environment, blockchain network conditions, market conditions, and regulatory changes. This chapter describes general risk factors related to the project's operations and does not imply any guarantee regarding the project's performance or token value. The project is committed to transparent information disclosure and continuous service improvement to support stable platform operations.

CHAPTER 7

Legal Notice & Disclaimer

7.1 Purpose of This Whitepaper

This whitepaper has been prepared to provide information on the LUMINOUSCREW project's vision, ecosystem, technical architecture, LUMI Token, and official roadmap. The purpose of this document is to serve as a reference for understanding the project; it is not intended as a solicitation for investment, the sale of a financial product, or legal, accounting, or tax advice. Readers should use this whitepaper as a reference and, where necessary, conduct independent review and seek professional advice.

7.2 Accuracy of Information and Revisions

This whitepaper is based on official materials publicly available at the time of writing. While the project makes efforts to ensure the accuracy of information, some content may be revised, changed, or updated as the service develops and the operating environment evolves. The latest information should be confirmed through the project's official website and official communication channels. When a new version is issued, the version number, release date, updated chapters, and a revision summary will be recorded.

7.3 Intellectual Property

The LUMINOUSCREW name, logo, design, service composition, and content included in this whitepaper may be protected under applicable law. Reproducing, modifying, distributing, or repurposing all or part of this whitepaper for commercial purposes without the project's prior consent may be restricted.

7.4 Forward-Looking Statements

This whitepaper includes descriptions of the project's future plans, vision, and direction of development. These statements are intended to describe the goals the project pursues and do not mean that future outcomes or schedules will necessarily be realized. Actual progress may differ depending on market conditions, technological change, the regulatory environment, and other external factors.

7.5 No Investment Advice; Limitation of Liability

This whitepaper is not an investment prospectus for a financial product and does not constitute investment solicitation or advice. All decisions regarding the acquisition, holding, or trading of LUMI Token must be made based on each participant’s independent judgment and responsibility, and the project does not guarantee the token’s price, market value, or any investment return. To the extent permitted by law, the project bears no liability for decisions made in reliance on this whitepaper or their consequences, and responsibility for the use of the service and the storage, management, and trading of digital assets rests with the user.

7.6 Regulatory Compliance and Official Channels

LUMINOUSCREW respects the laws and regulatory environment of each jurisdiction in which the project operates. However, regulations applicable to digital assets and blockchain services may differ by country and region, and it is the user’s responsibility to confirm the relevant laws of their jurisdiction of residence. This whitepaper does not guarantee legal compliance in any specific country. The latest information related to the project is recommended to be confirmed through the official website, official documents, and communication channels operated directly by the project; information from other sources may not represent the project’s official position.

7.7 Final Statement

Based on its vision of ‘a community coin platform where consumption becomes cooperation,’ LUMINOUSCREW aims to build an ecosystem in which users, merchants, and the platform grow together. LUMI Token, as the core digital asset connecting this ecosystem, is intended to grow together with the platform.

CHAPTER 8

Brand Identity

8.1 The Meaning of LUMINOUSCREW

LUMINOUS conveys the meaning of ‘shining’ or ‘illuminating,’ while CREW refers to a community of people moving toward a shared goal together. The name LUMINOUSCREW symbolizes a platform direction in which technology and people connect, and community grows together. Starting from consumption, the project aims to build an ecosystem in which users and merchants cooperate and grow together.

8.2 Brand Vision

> *A community coin platform where consumption becomes cooperation.*

This sentence is not a simple slogan, but the brand message that most concisely captures the philosophy the project pursues.

8.3 Core Identity

Core Value	Description
Connection	A platform that connects people and services
Community	A participatory ecosystem that grows together
Trust	Sustainable operations built on trust
Growth	Long-term growth of the platform and community

8.4 Visual Identity

LUMINOUSCREW uses a brand identity built around black and gold. This color scheme conveys both trustworthiness and a premium image, and is applied consistently across the official website. The graphic language follows the principles of simple shapes, clear connecting lines, generous white space, high contrast, intuitive icons, and consistent color, and information within the document is prioritized in the order of core message, diagram, explanation, and reference information, allowing readers to quickly grasp the most important content.

8.5 Brand Experience

LUMINOUSCREW aims to create an environment where users experience the platform naturally, rather than emphasizing the technology itself. Brand experience is not limited to design or interface; the core of the brand experience lies in enabling users to feel the values of trust, connection, and community throughout the entire course of using the service.

CHAPTER 9

Conclusion

9.1 What LUMINOUSCREW Stands For

LUMINOUSCREW is a project that connects users, merchants, and the platform into a single ecosystem centered on consumption. While the project is built on blockchain technology, it defines the connection between people and community — rather than the technology itself — as its more important value. Technology changes over time, but trust, participation, connection, and community are the elements a platform needs in order to keep growing, and the project believes these values determine a platform's long-term competitiveness.

9.2 A Journey Built Together

The project's growth is not the achievement of the development team alone, but a process built together by users, merchants, and the community. Each participant contributes to the ecosystem's development as a member of the platform, and the platform aims to provide an environment in which this participation can continue over time. This reflects the project's long-term perspective, which prioritizes building a sustainable platform over short-term attention or transient market trends.

9.3 Final Vision

> *A community coin platform where consumption becomes cooperation.*

This sentence most concisely captures the direction LUMINOUSCREW pursues. Based on blockchain technology, the project aims to connect people with one another and build a sustainable ecosystem in which users and merchants grow together. As the core digital asset connecting this ecosystem, LUMI Token will grow together with the platform, and LUMINOUSCREW seeks to build the future of a new digital community grounded in trust and connection.

Appendix

Appendix A. Technical Specification

Item	Value
Project	LUMINOUSCREW
Token	LUMINOUSCREW Token
Symbol	LUMI
Network	BNB Smart Chain
Standard	BEP-20
Total Supply	10,000,000,000
Decimals	18
Mint	Disabled
Burn	Supported
Contract Address	0x3CFEA1d440c98aA91F59692112a50999EA97A0Cf

Appendix B. Core Values

Core Value	Description
Connection	A platform that connects people and services
Community	A participatory ecosystem that grows together
Trust	Sustainable operations built on trust
Growth	Long-term growth of the platform and community

Appendix C. Official Roadmap Summary

Timeline	Milestone
Oct 2026	Outstanding Products

Timeline	Milestone
Nov 2026	PancakeSwap Listing
Jan 2027	UX/UI & Merchant Upgrade
Feb 2027	Offline Merchant Expansion
Apr 2027	Open Marketplace
May 2027	Startup Discovery
Jul 2027	Global Expansion
